SUMMARY

I'm an Information Security Specialist with 5+ years of hands-on enterprise security experience. I got my start in finance at TD Bank, where three years of managing sensitive client information under regulatory pressure taught me that real security is about process and trust, not just technology.

That foundation led me to cybersecurity. After completing a Computer Programming Analyst diploma at George Brown College, I joined Teranet Inc. as an Information Security Specialist. Over the past 3+ years I've rolled out Zero Trust, migrated WAF infrastructure for 20+ applications, replaced the SIEM and EDR stack, built AI governance standards, and pushed phishing awareness from 88% to 98%.

EXPERIENCE

🎯 Information Security Specialist

Oct 2022 – Present

Teranet Inc.

Toronto, ON

- Investigated and responded to security incidents using enterprise SIEM and EDR platforms, following threats through to remediation with the teams involved.
- Led Zero Trust implementation, strengthening identity-based authentication and DLP enforcement across enterprise systems.
- Wrote AI governance standards covering security, privacy, and compliance obligations.
- Conducted vulnerability assessments, supported penetration testing, and worked with IT to sort out what to fix first.
- Ran security awareness programs, lifting phishing simulation scores from 88% to 98% across the organization.

- Automated security workflows and built executive reporting dashboards to keep leadership informed on where the real risks sat.
- Migrated WAF infrastructure covering 20+ applications to the cloud with no downtime.

Financial Services — Risk & Compliance

Aug 2019 – Oct 2022

Toronto, ON

TD Bank

- Managed sensitive client information under strict regulatory and compliance standards.
- Identified fraud risks and escalated suspicious activity following internal escalation procedures.
- Applied AML and KYC procedures during client onboarding and account reviews, identifying red flags and escalating cases through the appropriate compliance channels.
- Collaborated with internal compliance teams to ensure branch-level adherence to regulatory requirements and audit-ready documentation practices.

APPROACH

Security That Gets Used

The best control is one people actually follow. I focus on solutions that get adoption, not just ones that look good in a report.

Straight Talk on Risk

I give honest assessments, not impressive-sounding ones. Some threats need immediate action; others can wait. I help teams tell the difference.

End-to-End Ownership

I don't drop work at the handoff point. Incidents, projects, and remediations get followed through to completion.

KEY ENTERPRISE PROJECTS

Backup & Disaster Recovery Assessment

BUSINESS CONTINUITY

Assessed backup and DR setup across on-premises and cloud environments. Reviewed RTO/RPO targets, tested recovery procedures, identified gaps, and delivered a DR readiness report for leadership with a prioritized action list.

WAF Migration — F5 Silverline to Cloud

CLOUD SECURITY

Migrated the Web Application Firewall from on-premises F5 Silverline to a cloud solution across 20+ web applications. Built new WAF rule sets, coordinated with application owners, and completed the migration with zero downtime or gap in protection.

F5 Silverline

Cloud WAF

Azure

Web App Security

Zero Downtime

RSA Authentication Migration & Upgrade

IDENTITY & ACCESS

Coordinated the migration and upgrade of RSA Authentication Manager for MFA and remote access. Reassigned tokens, updated

VPN and system integrations, and maintained uninterrupted authentication for all users throughout the change.

VPN Integration

PAM

Zero Trust Implementation

SECURITY ARCHITECTURE

Rolled out Zero Trust architecture across the organization using identity and device controls: conditional access in Azure AD, device compliance enforcement, and phased removal of implicit network trust.

Identity Security

EDR Replacement — Carbon Black

ENDPOINT SECURITY

→ Microsoft Defender

Managed the replacement of Carbon Black with Microsoft Defender for Endpoint across all endpoints. Planned phased rollout, removed legacy agents, and integrated Defender alerts into the SIEM for unified visibility and simplified day-to-day management.

SIEM Integration

SIEM & VM Replacement — Rapid7 → Jolera, Qualys & Elastic

SIEM & VULN. MANAGEMENT

Replaced Rapid7 InsightIDR/InsightVM with a modern stack: Jolera for SIEM and detection, Qualys for vulnerability management, and Elastic Agent for log collection. Built new detection rules and dashboards from scratch.
